

Amirali

Junior Backend Developer | Python | FastAPI | Linux | Networking

📍 Qom, Iran ✉ a.a.driv73358@gmail.com ☎ 0996 650 0590 🌐 aamiroo 📧 a_drv_7

Education

- B.Sc. Islamic Azad University, Qom Branch**, Computer Engineering Qom, Iran
present
- Currently studying in the 3rd semester of Computer Engineering.
 - Focused on backend development, programming, Linux systems, networking, and software engineering.
 - Developing practical projects alongside academic studies.

Projects

Anonymous Messaging Platform

github.com/aamiroo/
Anonymous

Python · FastAPI · SQLAlchemy · SQLite · WebSocket · Eitaa

- Developed a full backend for an anonymous messaging platform with real-time messaging via WebSockets.
- Implemented secure authentication using Eitaa initData validation + JWT for admin access.
- Designed modular architecture separating authentication, users, conversations, and admin features.
- Used SQLAlchemy with SQLite for data persistence and structured API design with FastAPI.

SourcesList

github.com/aamiroo/
SourcesList

Python · FastAPI · JavaScript · REST API · HTML/CSS

- Built a FastAPI REST API that generates customized Debian APT repository configurations based on user input.
- Implemented robust request validation and dynamic configuration generation logic.
- Separated repository metadata from application logic using structured JSON for better maintainability.
- Developed a lightweight frontend that allows users to generate, copy, and download configurations easily.
- Designed a clean separation between frontend and backend components for modularity and future scalability.

Telegram Reminder Bot

github.com/aamiroo/
Telgram_bot

Python · python-telegram-bot · MySQL · pytest

- Built an asynchronous Telegram bot using python-telegram-bot for scheduling and sending reminders.
- Implemented scheduled tasks with JobQueue to handle timed notifications reliably.
- Added persistent data storage using MySQL to keep user reminders and settings across restarts.
- Implemented timezone-aware scheduling so reminders work correctly for users in different time zones.
- Wrote automated tests with pytest to ensure reliability of core features.
- Used environment variables for secure configuration and credential management.

Technical Skills

Languages: Python, Bash, SQL, Go (learning)

Backend: FastAPI, REST APIs, WebSocket, SQLAlchemy, Uvicorn

Databases: SQLite, MySQL, MariaDB

Systems & Networking: Linux, TCP/IP, HTTP, DNS, DHCP, NAT, network programming, process management

Development Tools: Git, GitHub, uv, pytest, Ruff, VS Code

DevOps & Infrastructure: Docker, Linux administration, systemd, virtualization, basic CI/CD concepts

Programming Concepts: Object-oriented programming, asynchronous programming, REST architecture, client-server architecture, authentication, authorization, database design

Areas of Interest

- Backend Engineering
- Python Development
- Linux Systems
- Network Programming
- API Design
- Database Systems
- DevOps & Infrastructure
- Systems Programming
- AI-Assisted Software Development

Current Focus

- Advanced Python and FastAPI
- Backend architecture and API security
- Authentication and authorization
- Linux system administration
- Networking and network programming
- Docker and containerization
- Go programming
- CI/CD and deployment
- Building software with AI-assisted development workflows
